Workshop

Successful CLIL Teaching: Exploring Strategies for Scaffolding and Lesson Planning in Bilingual Contexts

Dr. Alina Wegner

Saturday, 09.11.2024, 10:00 – 15:00 o'clock

BI 85.3

This workshop addresses two components of successful Content and Language Integrated Learning (CLIL): scaffolding techniques and effective lesson planning.

In the first part, participants will explore the concept of scaffolding, focusing on how teachers can provide support that helps learners in both content comprehension and language acquisition. We will examine practical scaffolding techniques, which help bridge the gap between learners' current abilities and learning objectives in a bilingual context.

In the second part, we will dive into CLIL lesson planning, a process that requires the careful integration of subject content with language goals. Participants will learn how to design lessons that enable the content-language synergy, how to choose meaningful tasks and how to select or adapt materials for the CLIL context.

The workshop will provide both theoretical insights and hands-on activities, allowing participants to leave with practical tools and strategies for planning and delivering effective CLIL lessons.
